

# Smart Buildings Smart Rooms Luxury Collection Unmatched Choice

A new generation of Room Management Systems combined with custom aesthetics and widest choice to make a hotel room stand out.

## Room Management System

## Mi-Fi RMS – No Compromise!

- ⊙ Unmatched variety and choice for Luxury and Budget Hotels.
- ⊙ Efficiency in energy and workflow for the hotel
- ⊙ Comfort and ease of use to the guest.
- ⊙ Total Solution
- ⊙ Dependable Service Provider with high reputation.

### Guest Comfort

Create a comfortable, inviting environment that allows guests to better appreciate their room.

Bedside panel provides convenient access to environmental controls, lighting, drapes, alarm clock, digital radio, and other amenity controls.

Presence detection sensor ensures automated, unobtrusive control.

We can customize every aspect of the ambience.

Optionally use smart phone or Tablet Apps for Smart management of the room

### Energy Efficiency

LCD temperature unit enables energy efficient climate control for heating and air conditioning in hotel room applications.

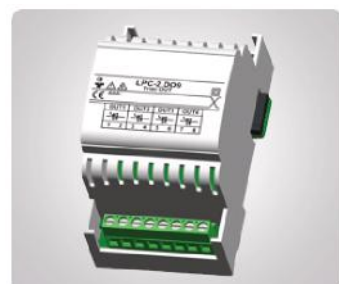

Intuitive user interface allow the guest to easily set the desired temperature.

Energy-saving controls promote environmental responsibility while enhancing guest comfort.

### Light controllers

Guestroom lighting control is more than just being able to turn lights on and off. Lighting control encompasses everything from basic energy savings to creating memorable guest experiences.

## Room Access & Occupancy Detection

Card reader panel offers easy access to the hotel room. It is enough just to approach the keycard to the reader and doors will unlock automatically using the electrical lock in the door frame.

The room status is visible on the panel in front of the door so the hotel staff doesn't disturb the guest if the room is occupied or he doesn't want to be disturbed. The same information is also shown on the computer at the reception.

## PIR Sensor

PIR sensor is used here to detect the Human body movement, whenever there is any body movement the voltage at output pin changes. Basically it detects the Change in Heat, and produce output whenever such detection occurs.

## Drape / Curtain Control

Automatically open and close your drapes to provide extra convenience as well as energy savings.

No need to pull on heavy or hard to reach draperies. No more cables to operate or strings that get tangled up!

# Luxury Switches & peripherals

The Widest Choice that you can ever find!
